

Prism EXT cellular register for existing meters

Got legacy water meters? Turn them into cellular-connected smart meters with Prism EXT.

Metron's Prism EXT is an advanced cellular water meter monitoring device that transforms nearly any standard meter into a smart water meter.

Using advanced sensor technology and the robust Verizon Wireless™ network, Prism EXT attaches to an existing meter and gathers critical water data in one-minute intervals and transmits it wirelessly to Metron's powerful dashboard, WaterScope™.

Easy to install, durable, and with best-in-class battery life, Prism EXT is the ideal solution for any commercial real estate owner or manager to get the water data they need to eliminate costly leaks and reduce water consumption without having to replace meters and submeters.

Prism EXT's sensor is attached to an existing meter as shown. After calibration, Prism EXT reliably captures water flow data for transmission to the cellular network.

WaterScope™

Accurate, 1-minute water consumption data isn't useful unless you can understand it. That's where WaterScope comes in. With AI-powered analytics and actionable reporting, WaterScope puts utilities – and residents – in control.

Offering leak alerts, usage summaries and details, violation alerts (such as irrigating on off-days) and easy integration with billing systems, WaterScope turns water consumption data into something you can take action on.
