

WaterScope®

Water Usage Reporting and Analytics

With hundreds of thousands of meters capturing water usage data every minute, that's a lot of data going up to the secure cloud. WaterScope is your tool for understanding it, whether you're a homeowner setting up leak alerts for peace of mind or a water utility staying on top of billing for your entire customer base. With advanced analytics and rules-based reporting, WaterScope turns information into action, simplifying the business of water.

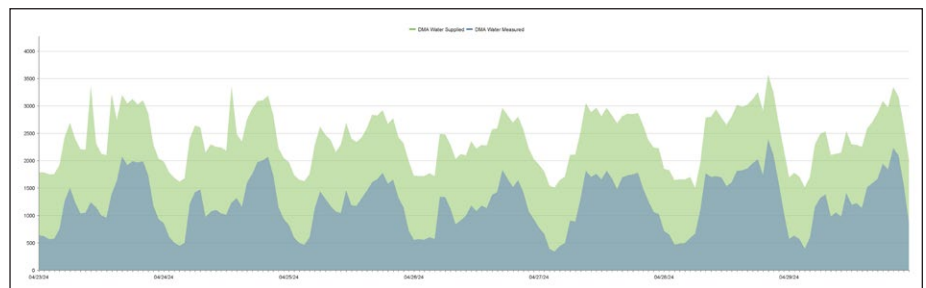

How it Works

Metron's water meters are equipped with the Prism Register which captures water usage data every minute, storing 1,440 readings per day. These registers transmit that data once per night to the cellular network, where it is routed into Metron's cloud-based WaterScope database.

WaterScope analyses the data and users can access it by logging in to their WaterScope accounts.

The one-minute water usage data allows WaterScope to recognise many types of water events, such as showers, toilet flushes, lawn irrigation and more. It provides breakdowns of where the water was used and whether there were losses due to leaks.

Advanced reporting across large numbers of meters provides everything a utility company needs to know for billing and maintenance.

Analysing infrastructure water losses

WaterScope for Utilities

Powered by Microsoft® Azure, WaterScope is reliable, highly-available and scalable. Its powerful analytics and reporting features give you the tools to run your water business efficiently, with as much insight into where the water goes as you need

Here are a few examples of what WaterScope can do for you:

- Capture accurate usage data for every customer
- Generate billing data easily
- Identify major leaks in your infrastructure
- Identify meters that aren't reading over cellular
- Find water being used at properties marked as unoccupied
- Identify residents flouting watering restrictions
- Identify residents with the most serious leaks
- Analyze usage trends, such as seasonal

Also available

- **WaterScope Mobile app** for iOS and Android which puts water usage data in the hands of individual homeowners and tenants
- **WaterScope Utility app** for iOS and Android for water utility field teams, streamlining their workflow for Metron meter servicing
- **WaterScope Datalink API** for integrating WaterScope's powerful features into host applications such as billing and rent management

WaterScope for Property Managers

Managers of mobile home parks, multi-unit commercial buildings, multi-family residences and HOAs can use WaterScope in conjunction with submetering to get accurate water usage information. Instead of RUBS, which isn't permitted in all states, you can bill your tenants for exactly the amount of water they use.

Benefits are:

- Fair and accurate water bills
- Leak detection for each unit
- Easy to understand
- Simple integration with billing systems
- Simple integration with Rent Manager

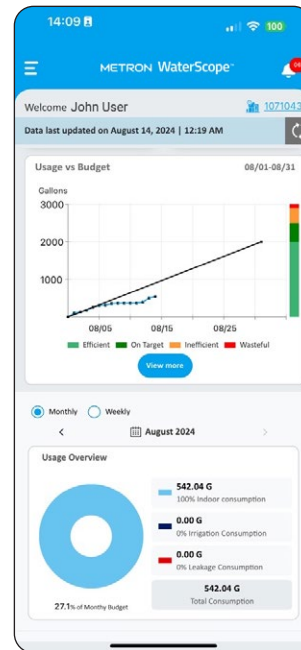

WaterScope for Residents

Whether you're a homeowner or a tenant in a mobile home park or apartment building, your water utility or property manager may give you access to WaterScope with your own login. With this, you can see your water usage in detail, including how much water was used for showers, kitchen, toilet and yard irrigation.

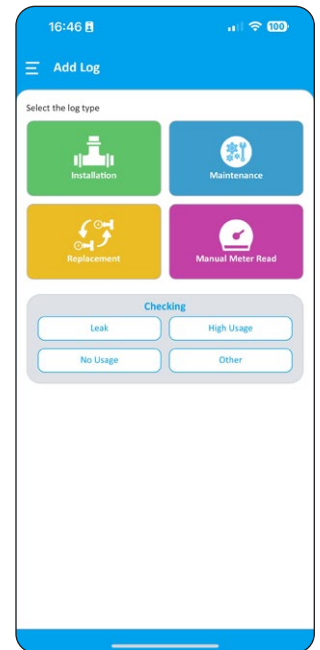

With WaterScope, you can:

- See your water usage accurately
- Get leak alerts to your cellphone
- Be smart about your water use
