

Prism WS cellular monitor for existing water meters

The Metron Prism WS is an advanced cellular water meter monitoring device that transforms nearly any standard meter into a smart water meter.

Using advanced sensor technology and existing national cellular networks, the monitor attaches to an existing meter and gathers critical water data in one-hour intervals and transmits it daily to Metron's online dashboard where users can view detailed water usage history. The Prism WS monitor also transmits leak alerts immediately, preventing major damage and saving water and money.

Easy to install and durable, the Prism WS monitor is the ideal solution for commercial, educational, multi-family or health-care property managers and owners to get the water data they need to eliminate costly leaks and reduce water consumption without having to replace meters and submeters.

In addition to email and text alerts, the online dashboard allows customers to access current and historical water usage. The web portal may be accessed from any internet connected device and provides additional tools for the end user to analyze and compare water consumption per property.

METRON Prism WS

The Prism WS's sensor is attached to an existing meter as shown. After calibration, it reliably captures water flow data for transmission to the cellular network.
