

Metering as a Service (MaaS)

Modern Water Metering Without the Capital Burden

A Better Way to Modernize Your Water System

Replacing an aging water meter system has traditionally required significant upfront capital, lengthy implementation projects, and ongoing maintenance responsibilities.

Metron's Metering as a Service (MaaS) changes that model.

Rather than purchasing an entire AMI system outright, utilities receive a complete turnkey metering solution—including smart meters, cellular communications, software, installation, maintenance support, and ongoing meter reading—for one predictable monthly service fee.

The result is faster modernization, lower risk, and improved operational efficiency.

What's Included

Metron's MaaS program delivers everything required to operate a modern cellular AMI system:

Smart Meter Infrastructure

- New high-accuracy AWWA-certified water meters
- Cellular-enabled smart registers
- Direct-to-cellular communications (no RF network infrastructure)
- Long-life battery-powered devices

Complete Installation

Metron manages the deployment from start to finish, including:

- Project management
- Professional meter installation
- System commissioning
- Installation documentation

INCLUDED

- Progress reporting
- Quality assurance

Utilities avoid managing multiple contractors while accelerating deployment.

Cloud Software Included

Every MaaS customer receives full access to Metron's WaterScope® platform.

Utilities gain:

- Near real-time meter data
- Usage analytics
- Leak detection
- Customer account visibility
- System reporting
- Secure cloud access for utility personnel

Customer access can also be extended to water customers through the WaterScope mobile application, empowering consumers with usage visibility and emergency leak notifications.

Billing Integration Included

Metron integrates directly with the utility's billing software to provide automated monthly meter reads.

Benefits include:

- Elimination of manual meter reading
- Improved billing accuracy
- Reduced labor costs
- Faster billing cycles
- Simplified utility operations

The integration is managed as part of the implementation—not as a separate project.

Ongoing Support Throughout the Life of the Program

Unlike a traditional equipment purchase, MaaS includes ongoing services that help ensure long-term success.

Metron provides:

- Software updates
- Platform enhancements
- Technical support
- Remote training
- Warranty support
- Equipment replacement for covered failures
- Continued compatibility with billing systems

As technology evolves, utilities continue benefiting from Metron's ongoing investment in the platform rather than managing upgrades independently.

Predictable Operating Costs

Instead of making a significant capital investment, utilities pay a predictable monthly service fee. This approach can help:

- Preserve capital budgets
- Simplify annual budgeting
- Reduce financial risk
- Align costs with operational budgets
- Accelerate AMI adoption without waiting for grant funding or large capital appropriations

The service model bundles equipment, connectivity, software, support, and meter reading into a single recurring service.

Designed for Long-Term Success

Metron's MaaS model is built around long-life infrastructure designed to deliver reliable performance for years to come.

Utilities benefit from:

- Cellular communications that eliminate fixed network infrastructure
- Long-life battery technology
- Continuous software enhancements
- Flexible renewal options as technology evolves
- A long-term partnership focused on operational success rather than simply selling hardware

Why Utilities Choose Metron's Metering as a Service

- ✓ Minimal upfront capital investment
- ✓ Turnkey installation
- ✓ Fully cellular AMI technology
- ✓ WaterScope cloud analytics included
- ✓ Customer leak notifications
- ✓ Automated billing integration
- ✓ Ongoing software updates
- ✓ Warranty-backed equipment
- ✓ Predictable monthly costs
- ✓ A single partner responsible for the complete solution

Modernize Your Water System with Confidence

Metron Metering as a Service enables utilities to deploy advanced metering infrastructure quickly, reduce operational complexity, and deliver better service to customers—all without the traditional barriers of large capital expenditures and complex technology management.

Metron handles the technology, so your team can focus on delivering water.

Metron's Meters

Metron's extensive range of residential and commercial water meters covers everything from the smallest residences to the largest industrial units, providing long-lasting accuracy and reliable AMI reads over the local cellular network. No more manual reads; no more expensive infrastructure deployments – if you've got cellular coverage, you've got daily water data.

Metron offers a wide family of proven single-jet meters (Spectrum® Jet), from half-inch to six inch, plus ultrasonic (Spectrum® Wave) and positive displacement (Spectrum® PD) options. For the largest capacities, Metron's proportional flow meters (Spectrum® Enduro) are ideal for industrial and fire service applications. We even have a portable hydrant meter (Spectrum® Hydrant) for construction crews.

Prism® Smart Cellular Register

The Prism register captures water flow rate data every single minute of every day. That's 1,440 data points every 24 hours. With that level of detail, it's possible to identify short-lived events such as toilet flushes and showers. No other vendor's meter system offers this level of insight into water usage.

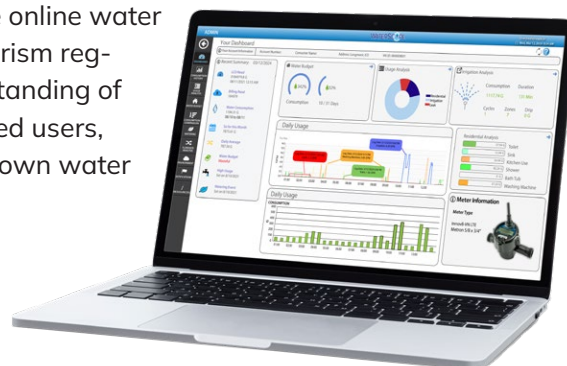

24 hours' worth of minute-by-minute data is uploaded in the middle of the night during a half-minute transmission to the local cellular tower, after which the data is immediately viewable in WaterScope. If a Prism register is configured to provide leak alerts, it won't wait until the middle of the night: it will send a transmission immediately a leak is detected. Prism registers are preconfigured to connect automatically to Verizon's nationwide cellular network, though other networks can be used depending on coverage at the deployment location. Cellular connectivity means you'll have no manual reads and no drive-bys.

WaterScope®

Metering isn't valuable without insight and action. Metron's WaterScope online water management platform captures one-minute data daily from the smart Prism registers that are installed on the meters, giving you unprecedented understanding of where your water's going to. Identify leaks and losses, catch unauthorized users, enforce irrigation restrictions, give residents and tenants access to their own water data, and enjoy seamless integration with your billing system.
